

OnPoint Pediatrics Vaccine Guideline

At Lone Tree Pediatrics, our priority is to provide safe, evidence-based care for every child. Vaccines are a key part of protecting children from serious and preventable illnesses. Our practice follows the immunization schedule recommended by the **American Academy of Pediatrics (AAP)**.

Our Approach to Vaccination

- The recommended vaccines have been extensively studied and monitored for safety.
- Research has repeatedly shown that vaccines do not cause autism or developmental disorders.
- Staying on the routine AAP schedule provides timely protection and reduces the risk of illness for your child and others.

Practice Expectations

To maintain a safe environment for all patients—especially those who cannot be fully vaccinated for medical reasons—we require families in our practice to follow the AAP-recommended immunization schedule.

Families who choose not to vaccinate will need to establish care at another clinic that aligns with their preferences.

Our Commitment to Families

We understand that parents may have questions or concerns about vaccines, and we are always willing to discuss them. Our goal is to partner with you to keep your child healthy and to provide clear, evidence-based guidance.
